

Guide:

1. Install PostgreSQL : <https://www.postgresql.org/download/windows/>

During installation remember:

Username:

postgres

Password:

Choose your own

Port:

5432

Leave everything else as default.

Also install **pgAdmin 4**.

2. Step 2 — Verify Installation

Open : pgAdmin 4

Connect using

Username: postgres

*Password: ******

3. Step 3 — Create Database

Inside pgAdmin

Right Click : Databases : Create : carresell_db

4. Step 4 — Install Python Packages

Inside your project folder:

- `pip install psycpg2-binary`
- `pip install flask_sqlalchemy`
- `pip install flask_login`
- `pip install flask_migrate`
- `pip install werkzeug`
- `pip install Flask-Migrate`

5. Initialize Database

- `flask db init`
- `flask db migrate`
- `flask db upgrade`

6. Run the Project in terminal using: `python -m flask --app app run`
